

GOWTHAM C

Associate Support Engineer

gowthamchinnan@gmail.com | 9003480578 | Madurai, Tamil Nadu | Available for 24/7 rotational shifts

linkedin.com/in/gowtham-mca

SUMMARY

Passionate and detail-oriented MCA student with a solid technical foundation in AWS cloud infrastructure, network troubleshooting, and Python automation. Experienced in monitoring cloud environments, tracking resource utilization, and identifying system inefficiencies. Possesses strong analytical problem-solving skills and a quick-learning mindset, eager to contribute to maintaining high availability, system uptime, and efficient incident management in a 24/7 NOC environment.

EDUCATION

Master of Computer Applications (MCA), 2024 – 2026
Rathinam Technical Campus, Coimbatore (Anna University)

Bachelor of Computer Applications (BCA), *The American College, Madurai* 2021 – 2024

TECHNICAL SKILLS

Cloud & DevOps

AWS (EC2, S3, IAM, CloudWatch concepts),
Kubernetes, CI/CD Pipelines

Networking & Systems

IP Networking Fundamentals (TCP/IP, DNS, DHCP),
Network Troubleshooting, Linux/Windows OS

Core Competencies

Incident Management, Root Cause Analysis (RCA),
SLA Adherence, SDLC

Programming & Automation

Python, C, C++, Java (Useful for infrastructure
scripting and log automation)

Web Technologies

HTML, CSS, JavaScript, Flask

Databases

SQL, MongoDB

Version Control

Git, GitHub

PROJECTS

Cloud Cost Monitoring & Infrastructure Optimization Tool, *Python | Flask | AWS*

- Developed a cloud infrastructure tracking tool using Boto3 and Flask to proactively monitor, analyze, and audit AWS resource utilization.
- Designed specific algorithms to scan, detect, and isolate idle AWS instances and underutilized cloud services, generating data-driven performance and cost-optimization recommendations.

Tamper-Resistant Cryptographic Authentication System, *Python | C++ | ESP32*

- Engineered an air-gapped security model utilizing ESP32 NVS flash storage and hardware priming to secure authentication gateways for GitHub and AWS enterprise portals.
- Implemented hardware-level HID emulation to safely inject credentials, effectively bypassing software-based keyloggers, clipboard vulnerabilities, and potential network interception vectors.

CERTIFICATIONS & PUBLICATIONS

Published Research Paper on Hardware Security, *IEEE* 2026

C and C++ Programming Certification, *SSI Technology*
